
AI Native Engineer with 15+ yrs of SWE experience. Spent the last few years as an AI Product Engineer building tools & infra ranging from attention tracking tools, to avatars and agentic systems. I have expertise with multimodal RAG, AI red-teaming (guardrails, alignment, evals), telemetry set up for agentic platforms. Proficient at web application development, automating services & building data/ ETL pipelines. **I accelerate AI first development.**

AI Projects

- My work at Gauntlet AI, along with other public projects can all be seen [here](#).

Vehicle & Lane Detection via Dashcam

2017

- AI model that detects and tracks vehicles {} Lane keep assist [Video1](#) | [Notebook](#) {} [Video](#) | [Repo](#)

Work History

Gauntlet, Nerdy

Lead AI Engineer

Austin, TX (Edmond Ok - remote) | Jan 2026 – present

- After completing [Gauntlet AI's](#) 10 week program, I was recruited to [Nerdy](#), where I report directly to the CEO and guide the company's transition to an AI first company.

EVLineup.org, Founder, CTO

Edmond Ok - remote | Aug 2023 – Dec 2025

- My first foray into the startup world. Mild success/ work in progress. Was more passionate about AI as the capabilities grew. Shut down the car listing business, keeping the EV info site running while focussing on AI

VillageMD (Walgreens), Lead Software Engineer

Chicago, IL (Edmond Ok - remote) | Jan 2021 – Oct 2023

- Built out appointment scheduling features for new & existing patients to VMD/ Walgreens adding growth of tens of thousands of appointments.
- Led performance improvement initiatives of current applications, reducing cost, drop offs & increasing visibility of patient activity, incl: Countly tracking, Datadog RUM & tracing, Updated 3 codebases (Flask to fastAPI, Bitbucket (& Drone) to Github (& GHA)); utilizing AWS lambdas instead of AWS EC2.
- Managed & mentored 8 engineers on above & other projects while committing code daily.

C.H. Robinson, Lead Software Engineer

Chicago, IL (Edmond Ok - remote) | Feb 2020 – Dec 2021

- Lead Engineer for Automation Lab: Architected & implemented several projects that automated manual tasks across business. Several thousand FTE hours (primary metric) saved. Incl:
 - Built APIs enabling: delivery & payment documentation, Invoice correlating, uploading paperwork.
 - Incorporated into automations (lambdas) triggered by inbox monitoring & SFTP upload.

First Stop Health, Senior Developer

Chicago, IL | May 2019 – Jan 2020

- Migration of old API used internally to new version for Mobile (React Native) Team, using DRF.
- Continuous addition and improvement of features for the product suite built with Django, used by hundreds of companies (thousands of employees). Eg: Incorporated PostGIS & Google Maps APIs for pharmacy loc.

Contractor, Software Engineer

Champaign, IL (remote) | July 2017 – April 2019

- Built out data pipelines for telemetry systems on Solar PV plant. Pandas, numpy, matplotlib extracted and shaped data for ML (img classifiers) to determine effectiveness of maintenance on performance over time.

Eskom Holdings, Data Analyst & Developer

Johannesburg | Jan 2008 – June 2017

- Built, deployed and maintained web apps research (solar, UCG, water treatment) departments
 - **2008-2011: Mech Eng:** Design, constr., comm. gas & water treatment plant. | Designed wellhead system saving ~\$5m in equipment. Pipe stress analysis with CAESAR. (SOLIDWORKS, CADWorx, Smartplant 3D).
-

Education

Udacity Full Stack Web Developer Nanodegree, Full Self Driving Nanodegree

2016, 2017

University of the Witwatersrand, BSc Engineering (Mechanical), MSc Engineering (Mechanical)

2008, 2014
